

## Using Netbeans IDE

### Requirements

- JAVA EE
- Apache TomCat Web Server
- Mysql (Maria DB)
- NetBeans IDE

### How To Run

1. Open NetBeans IDE
2. Go to -> File -> Import Project

3. Select from Zip And Choose The Zip File in The Folder Question1 -> (1a ) SubFolder named as

4. To Gain Access to the database You can import the mysql dump file (fifa18.sql) Into your mysql (Maria DB).
5. Change The following line of code to a domain name and port number of your server, in the code below localhost is the server name and its running on port 8083

```
.resource ("http://localhost:8083/RESTful COMESA API/rest/json/get/teams");
```

6. Change The following line of code to a server name and port number of your sql Database, in the code below localhost is the server domain name and mysql is running on port 3306. User=root is mysql user and password=20152016 is the password provide these respectively, if your database has no password then remove the password leave it as "user={mysql user e.g root}&password=" in my case it will be "user=root&password="

```
/ MySQL database connection  
on ("jdbc:mysql://localhost:3306/fifa18?" + "user=root&password=20152016");
```

7. To run this app
  - In NetBeans Projects Window Right Click On Comesa\_Interview\_Questions Web App and click on Run.

Note: You can also run this app in Apache Tomcat directly by extracting it and putting the extracted folder in Apache Tomcat's webapps folder. Access the server in your browser and append the app name.
